

Bitchiko Tchelidze

Senior .NET Software Engineer

Email: bubachelidze1@gmail.com

Portfolio: <https://bitchiko.dev/>

Location: Tbilisi, Georgia

LinkedIn: <https://www.linkedin.com/in/bitchiko-tchelidze-56a01ab4/>

PROFESSIONAL SUMMARY

Software Architect with deep expertise in designing and building scalable, high-performance systems in the .NET ecosystem.

OPEN SOURCE CONTRIBUTIONS

Imposter

<https://github.com/themidnightgospel/Imposter>

Author

Implemented a high-performance, memory-efficient mocking library for .NET that uses source-generator technology to create test doubles with minimal overhead.

It enables developers to write faster, cleaner unit tests by dramatically reducing allocation and execution time compared to traditional mocking frameworks.

EXPERIENCE

Software Architect

May 2022 – Present

Mettler-Toledo International, Inc • Remote

I'm part of the team building Mettler-Toledo's next-generation experiment management platform — a comprehensive software solution that helps chemists plan, execute, and analyze experiments with top-notch user experience.

As an Architect, I focus on shaping the system's design, ensuring it's robust, scalable, and built for long-term evolution. My contributions include:

Designing and developing core components that seamlessly integrate with Reactor systems, enabling real-time communication and automated control of experimental parameters.

Leading architectural decisions that enhance performance, maintainability, and overall software quality.

Identifying and resolving performance bottlenecks, improving code readability, and driving consistent engineering practices across the team.

Introducing code generators and development tools that reduce boilerplate and accelerate feature delivery.

Conducting code reviews, mentoring team members, and fostering a culture of craftsmanship and collaboration.

Ensuring reliability through comprehensive unit, integration, and acceptance testing strategies.

Ultimately, my goal is to bridge technical excellence with scientific innovation — empowering chemists to focus on discovery while the software takes care of complexity.

Data Engineer

Nov 2021 – Apr 2022

Templafy • Enidhoven, Netherlands

During this role, I explored the data engineering domain, contributing to the design and development of a modern ETL pipeline and improving data processing workflows across the organization.

Key contributions:

Designed and implemented ETL processes using Python, PySpark, and Azure Synapse, enabling more reliable and efficient data movement.

Rewrote legacy Jupyter notebook scripts into modular, testable components with unit tests, and automated their execution as part of continuous integration.

Collaborated with other engineering teams to promote better data tracking and observability, highlighting its impact on decision-making and product insights.

Technologies: Python, PySpark, Apache Spark, Azure Synapse, Azure Purview, Azure Functions, Jupyter Notebook, Data Lakes, PowerShell, Dedicated SQL (formerly SQL DW).

Although this was a short-term role, it gave me hands-on experience in data pipelines, large-scale data processing, and Azure's data ecosystem, strengthening my architectural perspective on data-driven systems

Senior .NET Back End Developer

Mar 2019 – Nov 2021

Leap Event Technology • Remote

At Leap Event Technology, I worked on building and evolving a microservices-based event management platform that powers large-scale live events and ticketing operations around the world.

One of my most impactful contributions was designing and implementing the ticketing system, built to handle thousands of requests per second with high reliability and performance — a core component ensuring smooth customer experiences during peak sales.

Beyond that, I played a key role in strengthening the platform's overall architecture and development processes:

Designed and developed new microservices and improved existing ones for better scalability and maintainability.

Built and maintained REST APIs with ASP.NET Core, ensuring consistent and efficient communication across the system.

Developed a background processing layer with .NET, NServiceBus, and Azure Service Bus, enabling reliable asynchronous operations.

Introduced monitoring and observability with DataDog, helping the team detect and resolve issues proactively.

Automated service creation with PowerShell scaffolding scripts, reducing setup time and boosting developer productivity.

Followed CI/CD practices with Azure Service Fabric, Jenkins, and Octopus Deploy, ensuring smooth and predictable releases.

Actively participated in code reviews, testing, and agile ceremonies, contributing to a strong engineering culture.

My focus was on delivering robust, maintainable systems that scale under pressure — while improving development workflows and fostering collaboration across the engineering team.

Remote Lead Back End Developer

Aug 2018 – Aug 2019

Li3ib LLC • Remote

Followed CI/CD development practice (using Azure).

Rewrote ASP.NET WebForms to ASP.NET MVC.

Developed a REST API.

Developed front-end with React.

Refactored existing codebase.

Refactored existing database schema.

Moved all the web apps from GCloud Private server to Azure App Services.

Wrote unit tests.

Directly communicate with the client.

Set up a technical roadmap of how to improve software quality while keeping business running.

Managing a small team of software developers and UI/UX designer

Technologies: C#, ASP.NET MVC, ASP.NET WebForms, Azure, Azure Service Bus, Azure WebJob, Azure DevOps, CI/CD, Entity Framework, Javascript, ReactJs, Redis, RegEx

Remote Lead Back End Developer

Jan 2018 – Mar 2019

BCC Elektro-speciaalzaken BV • Remote

Developed new features using ASP.NET Core and Angular.

Followed CI/CD development practice (using Azure).

Performed code reviews regularly.

Wrote unit tests.

Followed Agile software development principles.

Monitored application insight and metrics on Azure.

Set up synchronization with Microsoft Dynamics.

Assisted Georgian team in technical concerns.

Made sure communication among client and team members were productive.

Technologies: C#, ASP.NET Core, ASP.NET MVC, ASP.NET Web API, Azure, Azure Service Bus, Azure WebJob, Azure DevOps, CI/CD, Entity Framework, Javascript, Angular, Redis

Remote Senior Software Developer

Apr 2018 – Aug 2018

WebCreek • Remote

Developed a back-end system using ASP.NET Core.

Developed the front-end using Angular.

Developed Windows services for managing data-intensive and periodic jobs.

Developed web scrapers with Selenium.

Investigated and fixed issues in existing functionality.

Technologies: C#, Windows Services, ASP.NET Core, Linq2db, MS SQL, Selenium

Back End Developer

Apr 2017 – Jan 2018

Wandio • Tbilisi, Georgia

Developed a REST API.

Wrote unit tests.

Developed client-side functionality with plain JavaScript.

Setup infrastructure for a web app on AWS.

Technologies: ASP.NET Core, C#, T-SQL, Entity Framework, jQuery, JavaScript

.NET Software Developer

May 2015 – Apr 2017

DoSo Management • Tbilisi, Georgia

Built a module which contains proxy server and parses target traffic with heavy use of RegEx. Dealt with low-level Win API.

Built a module in existing enterprise application for managing one of the biggest hospitals in Georgia, using DevExpress.

Built a web version of existing software using DevExpress.

Built a company's main website using ASP.NET MVC, EF, and C#.

Technologies: C#, .NET, T-SQL, WinAPI, RegEx, Entity Framework, DevExpress, ASP.NET MVC
